PROJECTS

- Created a Flask web application on Google Cloud's App Engine utilizing Google's Vision API to automatically generate accessible HMTL image tags for uploaded photos.
- Built a web application using Node.js and jQuery that allows two users to play the board game Go.
- Integrated test-driven development practices into the construction of an Android appointment book application in Java to create, organize, and search for appointments.
- Created a relational database in PostgreSQL of corporate data, including financial performance and board make-up, to compare the performance of companies in the Dow Jones Industrial Average.
